Newborns are perhaps the most vulnerable population the world over. Preterm or babies born too early, less than 37 weeks gestation, are particularly at risk. Currently, prematurity is the leading cause of death among children under five around the world, and a leading cause of disability and ill health later in life. Sub-Saharan Africa and south Asia account for over 80 percent of preterm births worldwide. Of the fifteen million babies born too early each year, more than one million die due to complications related to preterm birth. Low birth weight (newborns weighing less than 2,500 grams at birth), due to prematurity and/or restricted growth in utero, is also a major contributor of newborn and child deaths, as well as disability and non-communicable diseases globally.

Nearly 85 percent of preterm babies are born between 32 and 37 weeks gestation and most of these babies do not need intensive care to survive. Solutions to improve the survival and health of vulnerable preterm and low birth weight babies exist. Essential newborn care (drying, warming, immediate and exclusive breastfeeding, hygiene and cord care) as well as basic care for feeding support, infections and breathing difficulties can mean the difference between life and death for small babies. More effort is needed to identify women at risk of preterm labor and support them to give birth in a health facility that can offer extra care when needed, such as support for adequate feeding with breast milk, continuous skin to skin contact, antibiotics, and antenatal corticosteroids. To do this, it is critical that families, communities and health care workers value small babies so that they receive the life-saving care they need. To turn the tide on these preventable deaths, we need action across the spectrum of care from adolescence and preconception, pregnancy, the safe management of labor and delivery, and effective immediate and later postnatal care.

Current, local data are crucial to inform priorities and drive scale-up. This national level profile provides the most current national-level information on the status of prevention and care for preterm birth and low birth weight in Indonesia. Data presented highlight a number of risk factors relevant to preterm and low birth weight in Indonesia as well as the coverage of important care for women and newborns from pregnancy, labor and delivery and the postnatal period. There is also information that provides insights into the health workforce, health policies, health information and community mobilization relevant to preterm birth and low birth weight.

The information provided here can be used to understand the current situation, increase attention to preterm births in Indonesia and to inform dialogue and action among stakeholders. Data can be used to identify the most important risk factors to target and gaps in care in order to identify and implement solutions for improved outcomes.

Much is already being done to prevent preterm birth and low birth weight and to improve outcomes for small babies. A safe and healthy start to life is at the heart of human capital and economic progress in every country, making care for small babies an essential investment in both the short- and long-term. As government leaders, civil society organizations, health workers, families, communities and other partners come together to enact change, we can prevent babies from being born too early and too small, and ensure that small babies get the critical life-saving care and nurturing they need.
## RISK FACTORS FOR PRETERM BIRTH

## Health Facility Readiness

- Delivery facilities with ACS in stock: NO DATA
- Delivery facilities with space designated for KMC: NO DATA

## Health Workforce

- Number of physicians, nurses and midwives per 10,000 population: 15.5
- Clinical standards for preterm care at hospital level: 4/10
- Nursing students receive formal education in neonatal care: NO DATA
- Policy for kangaroo care: NO DATA
- Policy for antenatal corticosteroids use: NO DATA
- Policy for safe oxygen use and CPAP: NO DATA

## Health Policy

- National plan for RMNCH: PARTIAL
- RMNCH plans include preterm component: NO DATA
- Policy for antenatal corticosteroids use: NO DATA
- Policy for safe oxygen use and CPAP: NO DATA

## Health Information

- Perinatal mortality audit in policy: YES
- Birthweight captured in health management information system: YES
- Gestational age captured in health management information system: YES

## Community Engagement

- National advocacy group for parents of preterm babies: NO DATA
- Preterm included in national RMNCH behaviour change strategy: NO DATA

## Indonisia Profile of Preterm and Low Birth Weight Prevention and Care

- Total population: 261,115,000
- Annual births: 4,991,000
- Total fertility rate per woman: 2.4
- Maternal deaths: 126, 6,400
- Stillbirths: 13.2, 73,400
- Infant deaths: 12, 61,000
- Under 5 deaths: 21, 105,000
- Direct preterm child deaths per year: 27,800
**DEFINITIONS AND DATA SOURCES**

**DEMOGRAPHICS**

- Total population
- Annual number of live births
- Total fertility rate
- Maternal mortality ratio
- Annual number of maternal deaths
- Stillbirth rate
- Annual number of stillbirths
- Neonatal mortality rate
- Annual number of neonatal deaths
- Infant mortality rate
- Annual number of infant deaths
- Under-5 mortality rate
- Annual number of under-5 deaths

**PRETERM BIRTHS AND DEATHS**

- Preterm birth rate
- Low birth weight rate
- Number of preterm births
- Ratio of boys to girls born preterm
- Extreme preterm babies (<28 weeks)
- Impaired preterm survivors
- Direct preterm child deaths per year

**HEALTH FACILITY READINESS**

- Delivery facilities with antenatal corticosteroids in stock
- Delivery facilities with neonatal bag and mask in stock
- Delivery facilities with space for kangaroo mother care

**COVERAGE OF CARE**

- Contraceptive prevalence rate
- Met need for birth spacing
- At least 1 antenatal care visit
- 4+ antenatal care visits
- First antenatal care visit <4 months
- IUD in pregnancy
- HIV+ pregnant women receiving ARVs
- Women <34 weeks receiving ACS
- Births attended by skilled attendant
- Births by caesarean section
- Infants weighed at birth
- Newborns initiated on RMC
- Early initiation of breastfeeding
- Exclusive breastfeeding up to six months
- PNC within 2 days (mothers)
- PNC within 2 days (newborns)

**RISK FACTORS FOR PRETERM BIRTH**

- Adolescent birth rate
- Birth interval <24 months
- Female short stature
- Anemia in women of childbearing age
- Female obesity
- Diabetes prevalence in women
- Hypertension in women
- Adult HIV prevalence
- Tobacco use amongst women
- Households with place to wash hands, soap and water
- Household solid fuel for indoor cooking
- Violence against women in pregnancy

**HEALTH WORKFORCE**

- Clinical standards for preterm care at hospital level
- Nursing students receive formal education in neonatal care

**HEALTH POLICY**

- National plan for RMNCAH
- Policy for ACS use
- Policy for safe oxygen use and CPAP

**HEALTH INFORMATION**

- Perinatal mortality audit in policy
- Birthweight captured in health management information system
- Gestational age captured in health management information system

**COMMUNITY ENGAGEMENT**

- National advocacy group for parents of preterm babies
- Preterm included in national RMNCAH behaviour change strategy
