Newborns are perhaps the most vulnerable population the world over. Preterm or babies born too early, less than 37 weeks gestation, are particularly at risk. Currently, prematurity is the leading cause of death among children under five around the world, and a leading cause of disability and ill health later in life. Sub-Saharan Africa and south Asia account for over 80 percent of preterm births worldwide. Of the fifteen million babies born too early each year, more than one million die due to complications related to preterm birth. Low birth weight (newborns weighing less than 2,500 grams at birth), due to prematurity and/or restricted growth in utero, is also a major contributor of newborn and child deaths, as well as disability and non-communicable diseases globally.

Nearly 85 percent of preterm babies are born between 32 and 37 weeks gestation and most of these babies do not need intensive care to survive. Solutions to improve the survival and health of vulnerable preterm and low birth weight babies exist. Essential newborn care (drying, warming, immediate and exclusive breastfeeding, hygiene and cord care) as well as basic care for feeding support, infections and breathing difficulties can mean the difference between life and death for small babies. More effort is needed to identify women at risk of preterm labor and support them to give birth in a health facility that can offer extra care when needed, such as support for adequate feeding with breast milk, continuous skin to skin contact, antibiotics, and antenatal corticosteroids. To do this, it is critical that families, communities and health care workers value small babies so that they receive the life-saving care they need. To turn the tide on these preventable deaths, we need action across the spectrum of care from adolescence and preconception, pregnancy, the safe management of labor and delivery, and effective immediate and later postnatal care.

In Myanmar, 99,000 babies are born too soon each year and 9,150 children under five die due to direct preterm complications. Current, local data are crucial to inform priorities and drive scale-up. This national level profile provides the most current national-level information on the status of prevention and care for preterm birth and low birth weight in Myanmar as well as the coverage of important care for women and newborns from pregnancy, labor and delivery and the postnatal period. There is also information that provides insights into the health workforce, health policies, health information and community mobilization relevant to preterm birth and low birth weight.

The information provided here can be used to understand the current situation, increase attention to preterm births in Myanmar and to inform dialogue and action among stakeholders. Data can be used to identify the most important risk factors to target and gaps in care in order to identify and implement solutions for improved outcomes.

Much is already being done to prevent preterm birth and low birth weight and to improve outcomes for small babies. A safe and healthy start to life is at the heart of human capital and economic progress in every country, making care for small babies an essential investment in both the short- and long-term. As government leaders, civil society organizations, health workers, families, communities and other partners come together to enact change, we can prevent babies from being born too early and too small, and ensure that small babies get the critical life-saving care and nurturing they need.

**Myanmar - National Clinical Standards for Care of Preterm Newborns at the Hospital Level**

- ACS
- Tocolytics
- Magnesium Sulfate
- Antibiotics for pPROM
- No antibiotics w/ intact membranes
- Vaginal birth preference
- CPAP for RDS
- Safe oxygen
- Surfactant

*Based on the 10 elements of care recommended by WHO for improved preterm birth outcomes.*
Adolescent birth rate per 1,000 girls: 36

Birth interval <24 months: 13%

Short stature among women of childbearing age: 6%

Anemia among women of childbearing age: 47%

Obesity in women of childbearing age: 25%

Tobacco use amongst women: 4%

Households with place to wash hands, soap and water: 84%

Solid fuel used for indoor cooking: 77%

Violence during pregnancy: 3%

Hypertension in women: 8%

Adult HIV prevalence: 2%

Overweight among women of childbearing age: 10%

Obesity in women of childbearing age: 77%

Tobacco use amongst women: 18%

Households with place to wash hands, soap and water: 1%

Solid fuel used for indoor cooking: 85%

Violence during pregnancy: 3%

Hypertension in women: 18%

Adult diabetes prevalence: 3%

Tobacco use amongst women: 18%

Households with place to wash hands, soap and water: 36%

Solid fuel used for indoor cooking: 71%

Violence during pregnancy: 9%

Hypertension in women: 9%

Adult diabetes prevalence: 3%

Tobacco use amongst women: 18%

Households with place to wash hands, soap and water: 36%

Solid fuel used for indoor cooking: 71%

Violence during pregnancy: 9%

Hypertension in women: 9%

Adult diabetes prevalence: 3%

Tobacco use amongst women: 18%

Households with place to wash hands, soap and water: 36%

Solid fuel used for indoor cooking: 71%

Violence during pregnancy: 9%
RISK FACTORS FOR PRETERM BIRTH

- **Adolescent birth rate**: Number of births per 1,000 adolescent girls aged 15–19. (9)
- **Birth interval ≤24 months**: Percentage of women with two live births within 24 months. (9)
- **Female short stature**: Percentage of women aged 15–49 less than 145 cm tall. (9)
- **Anemia in women of childbearing age**: Percentage of women aged 15–49 with anemia (cut-off <12.0 g/dl). (9)
- **Female obesity**: Percentage of women aged 15–49 with a body mass index expressed as the ratio of weight in kilograms to the square of height in meters (kg/m²) of more than 25.0 kg/m². (11)
- **Diabetes prevalence in women**: Percentage of adult women with fasting plasma glucose ≥126 mg/dl (7.0 mmol/l) or on medication for raised blood glucose. (11)
- **Hypertension in women**: Percentage of adult women with raised blood pressure (systolic blood pressure ≥140 mmHg or diastolic blood pressure ≥90 mmHg) or on antihypertensive medication. (No data)
- **Adult HIV prevalence**: Percentage of adults living with HIV. (10)
- **Toxic use among women**: Percentage of women aged 15–49 who smoke cigarettes or a pipe or use other tobacco products. (9)
- **Households with place to wash hands, soap and water**: Percentage of households with a place for washing hands that includes water, soap, or other cleansing agents. (9)
- **Household solid fuel for indoor cooking**: Percentage of households using solid fuel for cooking indoors. (9)
- **Violence against women in pregnancy**: Percentage of women aged 15–49 who have ever experienced physical violence during pregnancy. (9)

HEALTH WORKFORCE

- **Health worker density per 10,000 population**: Number of medical doctors (physicians), including generalist and specialist medical practitioners, nursing and midwifery personnel per 10,000 population. (12)
- **Clinical standards for preterm care at a hospital level**: Percentage of 10 critical elements of preterm care (antenatal corticosteroids, tocolytics, antibiotics with intact membranes, vaginal birth preference, kangaroo mother care, continuous positive airway pressure for respiratory distress, safe resuscitation (e.g. surfactant) included in national clinical standards or guidelines. (13)
- **Nursing students receive formal education in neonatal care**: Yes: Diploma or certificate program available for nurses in neonatal care. / No: No formal additional certification. (13)

HEALTH POLICY

- **National plan for RMNCAH**: Yes: Coated plan or plans to scale up maternal, newborn and child health interventions available at the national level. / Partial: Coated plan available but not for all components. / No: No coated implementation plan for maternal, newborn and child health available. (14)
- **RMNCAH plans include preterm components**: Yes: RMNCAH strategy includes mention of any critical elements of preterm care. / No: No mention of any critical elements of preterm care. (13)
- **Policy for KMC**: Yes: National policy recommends Kangaroo Mother Care for low birth weight newborns. / No: National policy does not recommend Kangaroo Mother Care for low birth weight newborns. (13)
- **Policy for ACS use**: Yes: National policy recommends use of antenatal corticosteroids for preterm labour. / No: National policy does not recommend use of antenatal corticosteroids for preterm labour. (13)
- **Policy for safe oxygen use and CPAP**: Yes: National policy specifies safe oxygen use when continuous positive airway pressure is administered. / No: National policy does not specify safe oxygen use. (13)

HEALTH INFORMATION

- **Perinatal mortality audit in policy**: National policy adopted requiring health workers to review perinatal deaths occurring in health facilities. Yes: national policy in place / No: No national policy. (13)
- **Birthweight captured in health management information system**: Place to capture birthweight on facility registers, or in annual health sector reports, where forms or registers were not available. (13)
- **Gestational age captured in health management information system**: Place to capture gestational age in newborns, on facility registers, or in annual health sector reports, where forms or registers were not available. (13)

COMMUNITY ENGAGEMENT

- **National advocacy group for parents of preterm babies**: Yes: Message regarding preterm birth are included in national strategy. No: National behavior change strategy does not include preterm birth messages. (13)
